REVOLUTIONARY E-BIKE SYSTEMS BY STURMEY-ARCHER

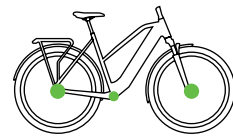

The most unique about the i-systems is it's customizability. Bikers get to choose between a front or rear motor, instead of being forced to choose for an engine at the bottom bracket. That way the i-systems are applicable to many different kinds of bikes, without having to redesign the entire frame. As long as there is space for the battery in the framework, bike-manufacturers are good to go!

The last system in the series is the i30 Kids-system. This system operates the same way as the i30-system, but with a little less battery capacity and with just one variety remote-and-display combo. The system is applicable for 20-inch bikes and 24-inch bikes and comes in a two-speed setup or a three-speed setup.
